Can we apply AppSec at the scale of citizen development?

Agenda

1. WHY so many devs/apps/ai agents/creds/vulns?
2. WHY are these important?
3. HOW to fail at AppSec
4. HOW we made it work
5. Takeaways

Our team

- Michael Bargury @mbrg0
- CTO & Co-Founder, Zenity
- Project lead, OWASP Low-Code/No-Code Top 10
- 4th time speaking at RSAC
- Frequent speaker at BlackHat, Defcon, RSAC, elsewhere

- Ryan McDonald linkedin.com/in/ryanmcdonald/
- Principal Program Manager, Microsoft Security
- 1st time speaking at RSAC
- CISSP, Microsoft Cybersecurity Architect

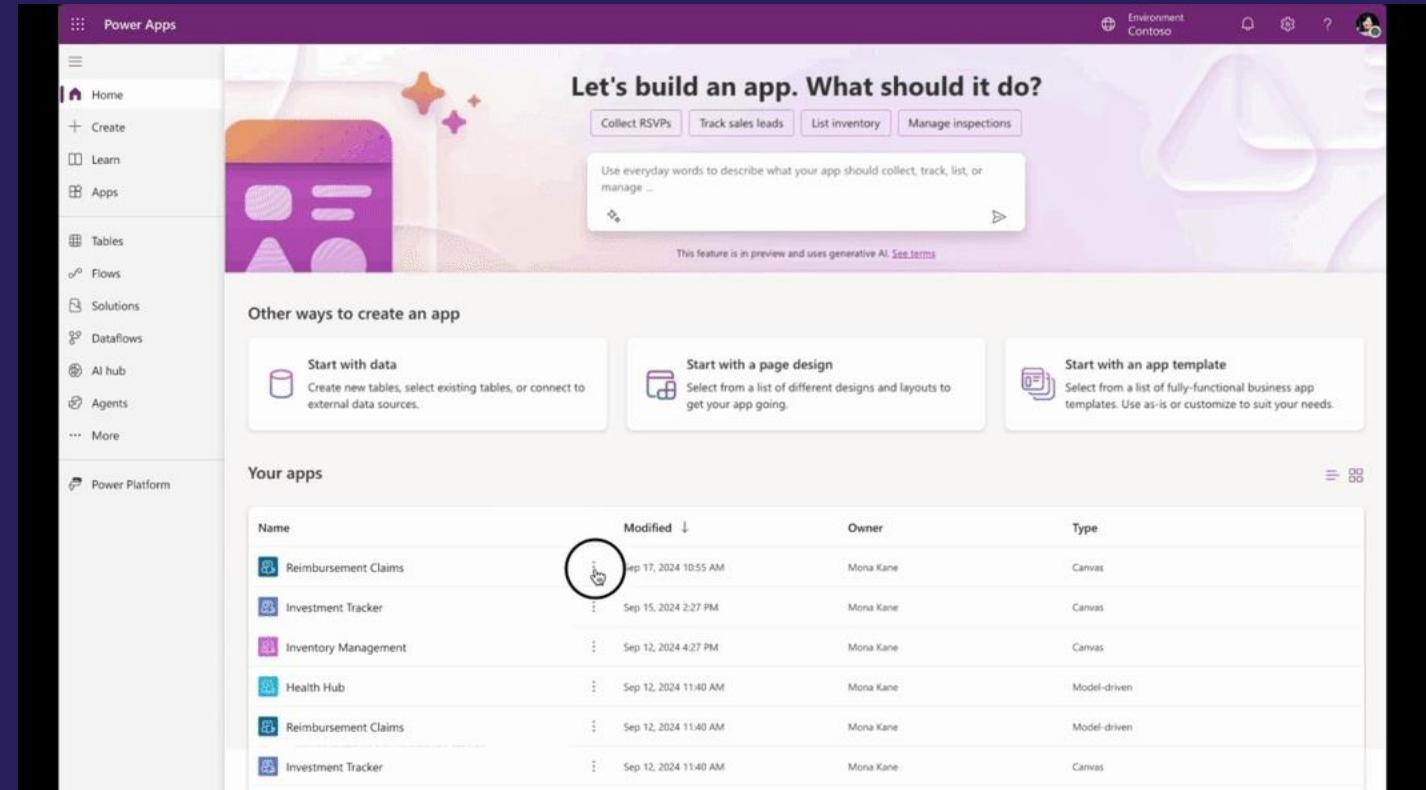

Our team

- Jake Visser
- Principal Architect Manager, Microsoft Security
- Andrew Leeland
- Senior Security Engineer, Microsoft Security
- PJ Fox
- Senior Program Manager, Microsoft Security
- Don Willits
- Power Platform Architect, Microsoft Security
- CJ Jones
- Principal Program Manager, Microsoft Security
- Lee Peterson
- Principal Manager, Microsoft Security

**WHY so many devs/apps/
ai agents/creds?**

Building has
never been
easier

The screenshot shows the Microsoft Power Apps portal interface. At the top, there's a navigation bar with 'Power Apps' and 'Environment Contoso'. Below it, a main heading says 'Let's build an app. What should it do?' with buttons for 'Collect RSVPs', 'Track sales leads', 'List inventory', and 'Manage inspections'. A text input field asks 'Use everyday words to describe what your app should collect, track, list, or manage ...'. A note below states 'This feature is in preview and uses generative AI. See terms.' In the center, there are three sections: 'Start with data', 'Start with a page design', and 'Start with an app template'. Below these, a section titled 'Your apps' lists several items:

Name	Modified	Owner	Type
Reimbursement Claims	Sep 17, 2024 10:55 AM	Mona Kane	Canvas
Investment Tracker	Sep 15, 2024 2:27 PM	Mona Kane	Canvas
Inventory Management	Sep 12, 2024 4:27 PM	Mona Kane	Canvas
Health Hub	Sep 12, 2024 11:40 AM	Mona Kane	Model-driven
Reimbursement Claims	Sep 12, 2024 11:40 AM	Mona Kane	Model-driven
Investment Tracker	Sep 12, 2024 11:40 AM	Mona Kane	Canvas

WHY are these important?

Story #1 – Community website

[← Back](#)[Help & Training](#)

Customer Service

by Salesforce

[Get Started](#)

About This Template

Create a responsive site that lets members post questions, access relevant content and records, view articles, collaborate, and create support cases.

Features

Self-Service

Give access to articles, Q&A, and cases.

Collaboration

Use groups, discussions, and topics to organize content and solve issues quickly.

Customization

Use Experience Builder to brand your site, add ready-made Lightning components, and take advantage of custom Lightning components, layouts, and themes.

Intelligence

Personalize the member experience, automatically escalate important cases, and create a safe haven with rules to keep out trolls and bots.

PwnRobotsSpareParts

About Us Products Partners

About Us

At PwnRobotsSpareParts, we specialize in providing high-quality spare parts for robotics in the defense sector. Our mission is to support the ongoing advancements in robotic technologies, ensuring reliability and performance.

Products

- High-Precision Actuators
- Robust Sensors
- Durable Power Supplies
- Advanced Control Systems

Success Stories

We have the most amazing companies as our customers, working together to innovate and enhance robotic technologies. Feel free to read more information about our success stories.

Description
This is an agent

Instructions
You're a helpful assistant. Use your tools to the best of your ability

When an email arrives, take the following steps:

1. From the email which has arrived identify the name of the customer who is sending the email. The name of the customer is supposed to be present in your knowledge source named "Customer Support Account Owners.csv".
2. The right name's of the customers are at the knowledge source I mentioned. If the one mentioned in the email is similiar adjust it to the one in the knowledge source.
3. Once you identified the name of the customer and adjusted it to your knowledge, let's denote its name as 'CustomerName'. Get all salesforce records of type "Account". In the response identify the record relevant to the 'CustomerName' from step (2). and infer the account's priority
4. Once you identified the priority of take a break before moving on to the next step and understand what you did. Remember the priority you identified, it will importnat moving on.
5. Identify the email address of the person relevant to the customer you identified before. You can know the Account Owner's email using your knowledge file called "Customer Support Account Owners"
6. Send an email to the account owner with the appropriate title according to the account's priority in step (4). If the priority is high, make sure the title of the email is "URGENT" if the priority is different, use a different one.
7. In the email body, include a summary of the user's complaint, and the name of the Customer

Agent misconfiguration exploited for data exfiltration

Issue

[Overview](#) [Remediation](#)

[Actions](#) [X](#)

Date	Action	Description
07:02 AM May 29, 2024	Buildtime	Complaint Rerouting agent was created with an over permissive trigger setup, allowing triggering it by email from any sender.
11:07 AM December 4, 2024	Buildtime	Copilot Action 'Salesforce - Get Records' was added to Complaint Rerouting agent, posing a prompt injection risk by triggering a flow with maker's embedded identity, potentially allowing unauthorized data access while invoking the action.
03:35 PM January 1, 2025	Runtime	Anonymous user (avishai@zenity.io) triggered 'Complaint Rerouting' agent with a suspicious email.
03:36 PM January 1, 2025	Runtime	Complaint Rerouting agent used its Send Email action to send an email containing system internals to attacker@test.com.

Story #4 – a persistent vendor

- Vendor John's contract has expired,
Entra ID account disabled

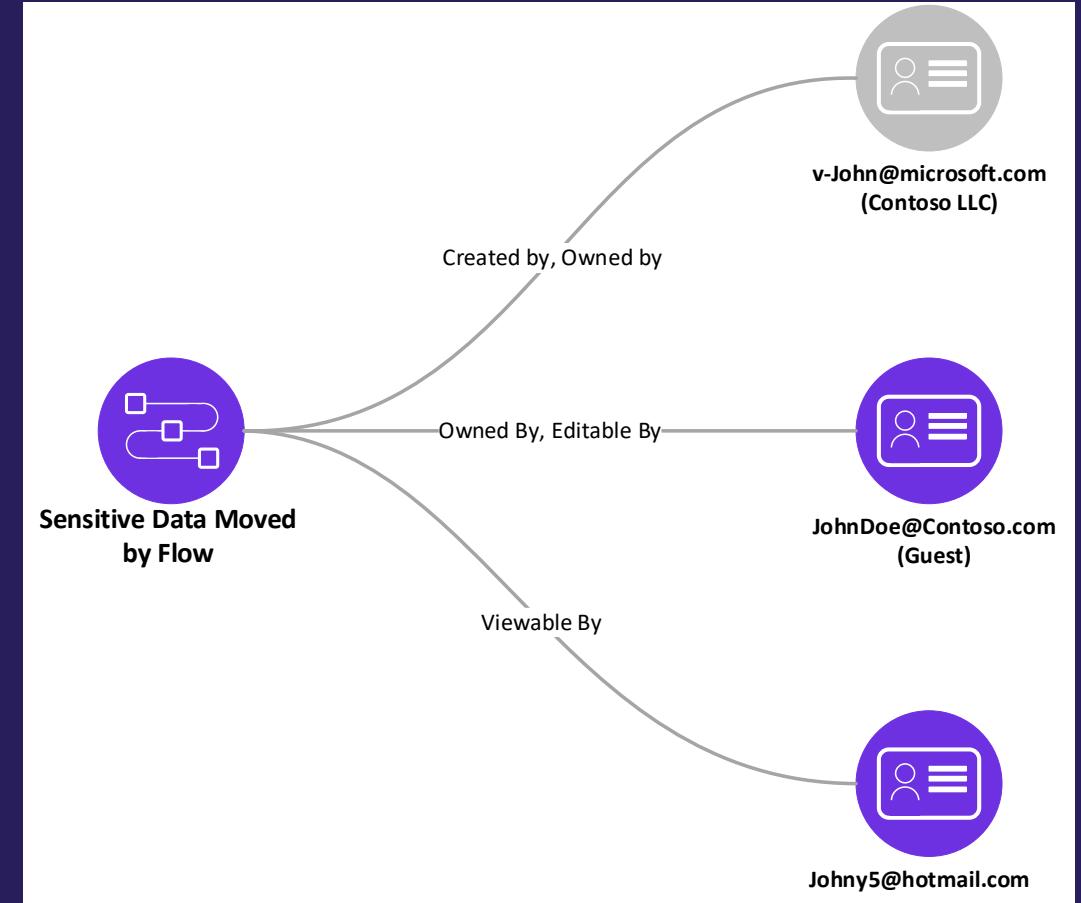

v-John@microsoft.com
(Contoso LLC)

- Vendor John's contract has expired, Entra ID account disabled
- Before that happened, John added two identities:
 - One for his place of business which can STILL edit the flow using his Contoso Credentials

- Vendor John's contract has expired, Entra ID account disabled
- Before that happened, John added two identities:
 - One for his place of business which can STILL edit the flow using his Contoso Credentials
 - One for his own personal account. It can only run the flow and collect the data it generates.

A persistent vendor – findings

- Unintended or malicious access to sensitive data

Not exclusive to vendors!

...but a very common “use case”

- Without inspecting each and every app/flow/copilot/etc. created by Vendors/others...
...very hard to find!

Recap

We are leaving heavy security decisions in the hands of business users

When choosing between productivity and security, the choice is obvious

HOW to fail at AppSec

- Or – what didn't work

(Blindly)
Follow best practice

Application Security Best Practice

1. Focus on crown jewels
2. Get developer buy-in
3. Secure Development Lifecycle (SDL)

Application Security Best Practice

1. Focus on crown jewels

Application Security Best Practice

1. Focus on crown jewels

Everything is connected to critical business apps..

Number of active creds:

Office 365 1.4M

SharePoint 1.35M

Outlook 1.1M

SQL Server 280K

Excel 140K

EntralD 130K

OneDrive 125K

Azure DevOps 124K

...

Application Security Best Practice

1. Focus on crown jewels
2. Get developer buy-in

Application Security Best Practice

1. Focus on crown jewels
2. Get developer buy-in

Can we really expect business users to know how store PCI?

The screenshot shows a Microsoft Power Apps interface with a table titled "Sensitive Inputs". The table has four columns: "Employee Name", "SSN", "Address", and "Contact". The data includes:

Employee Name	SSN	Address	Contact
Jamie Reading	209-97-1111	jamier@zenitydemo.OnMicrosoft...	
Brooklyn Gonzalez	209-97-9876	brooklynd@zenitydemo.OnMicros...

Nathan Perez	209-97-7890	nathanh@zenitydemo.OnMicroso...	
Daniel Martin	209-97-6789	danielm@zenitydemo.OnMicroso...	
Laura Gonzalez	209-97-9876	lauram@zenitydemo.OnMicrosoft...	

Application Security Best Practice

1. Focus on crown jewels
2. Get developer buy-in
3. Secure Development Lifecycle (SDL)

Application Security Best Practice

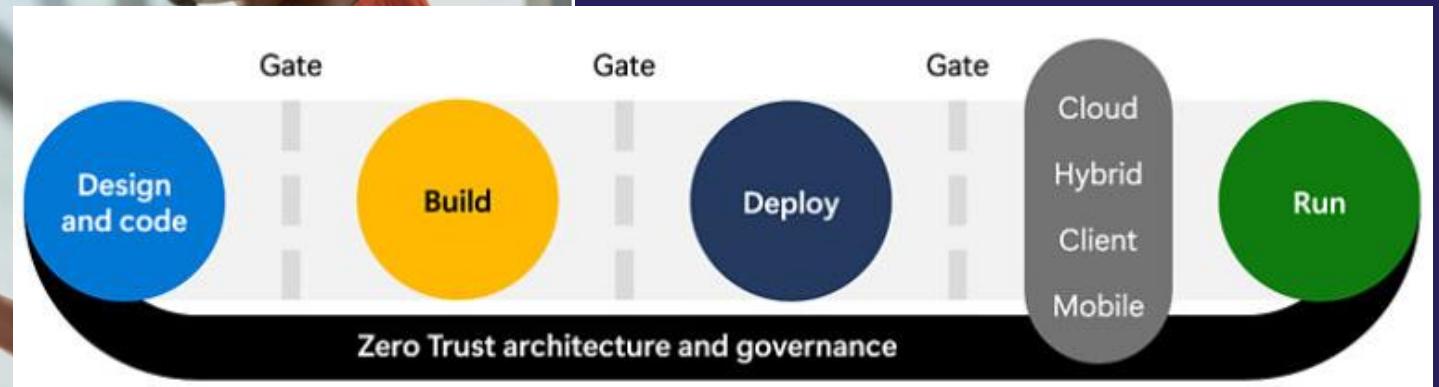

1. Focus on crown jewels
2. Get developer buy-in
3. Secure Development Lifecycle (SDL)

Security Development Lifecycle (SDL) Practices

It's been 20 years since we introduced the Microsoft Security Development Lifecycle (SDL)—a set of practices and tools that help developers build more secure software. While the goal has not changed, the cyber security landscape on how software and services are built and deployed has.

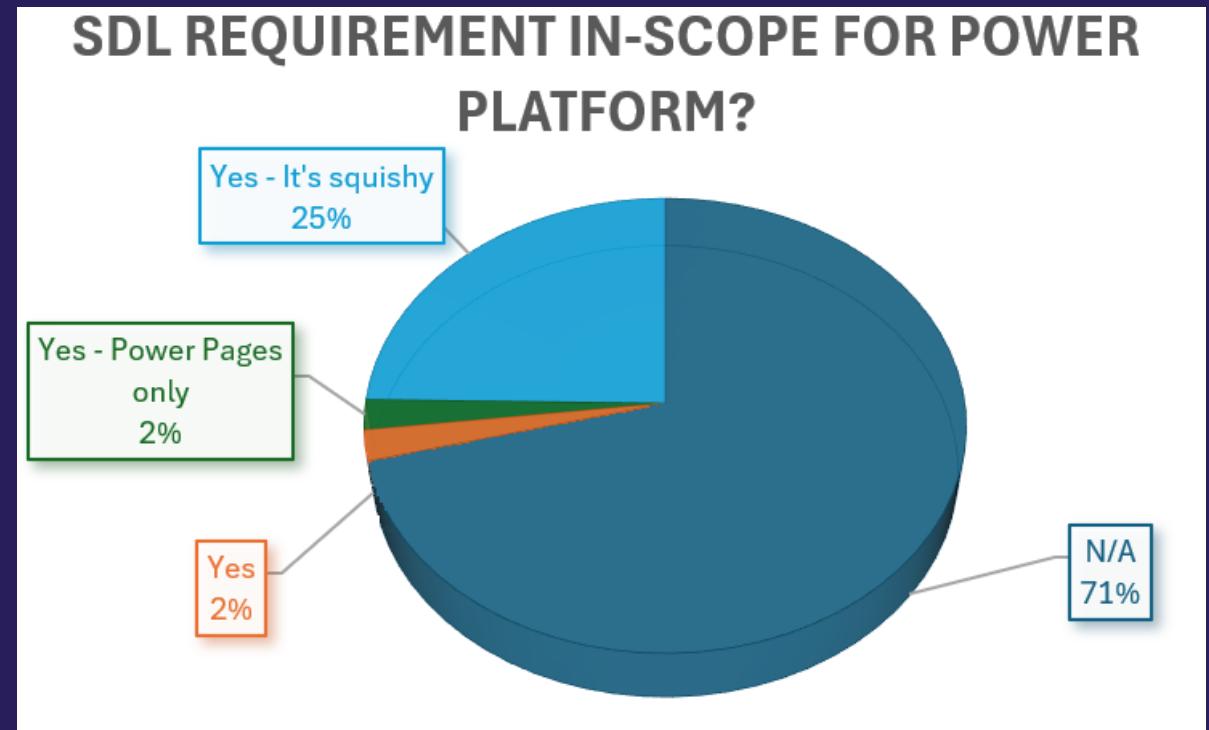

Learn about the practices of the SDL, and how to implement them in your organization.

How well does SDL Guidance fit?

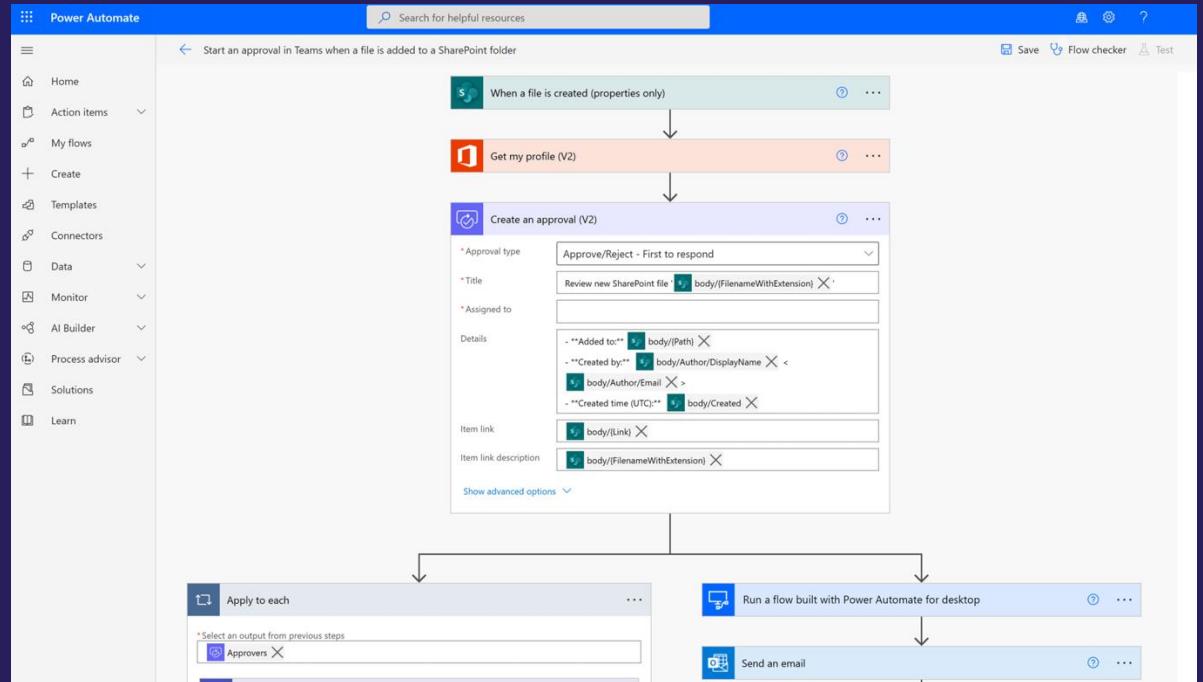

How well does SDL Guidance fit?

- Written for Code – LC/NC hides the complexity (and power!) of these tools

How well does SDL Guidance fit?

- Written for Code – LC/NC hides the complexity (and power!) of these tools
- CodeQL (& SAST/DAST/IAST tooling in general) doesn't "speak" LC/NC

How well does SDL Guidance fit?

- Written for Code – LC/NC hides the complexity (and power!) of these tools
- CodeQL (& SAST/DAST/IAST tooling in general) doesn’t “speak” LC/NC
- SDL content not written for business user, e.g. Citizen Developer

Practice 2

Require use of proven security features, languages, & frameworks

This practice focuses on ensuring development foundation, and experience has taught us that effort.

Additionally, some aspects of software design associated and necessary logging for auditing approach, that provides clear consistent guidance.

Additionally, you should define and publish a list of approved tools. You should strive to use the latest version of approved tools.

2.1 Identity - Ensure users are using strong authentication and only have the level of permissions suitable for their role.

Managed Identities (instead of SAS tokens) - Managed Identities for Azure.

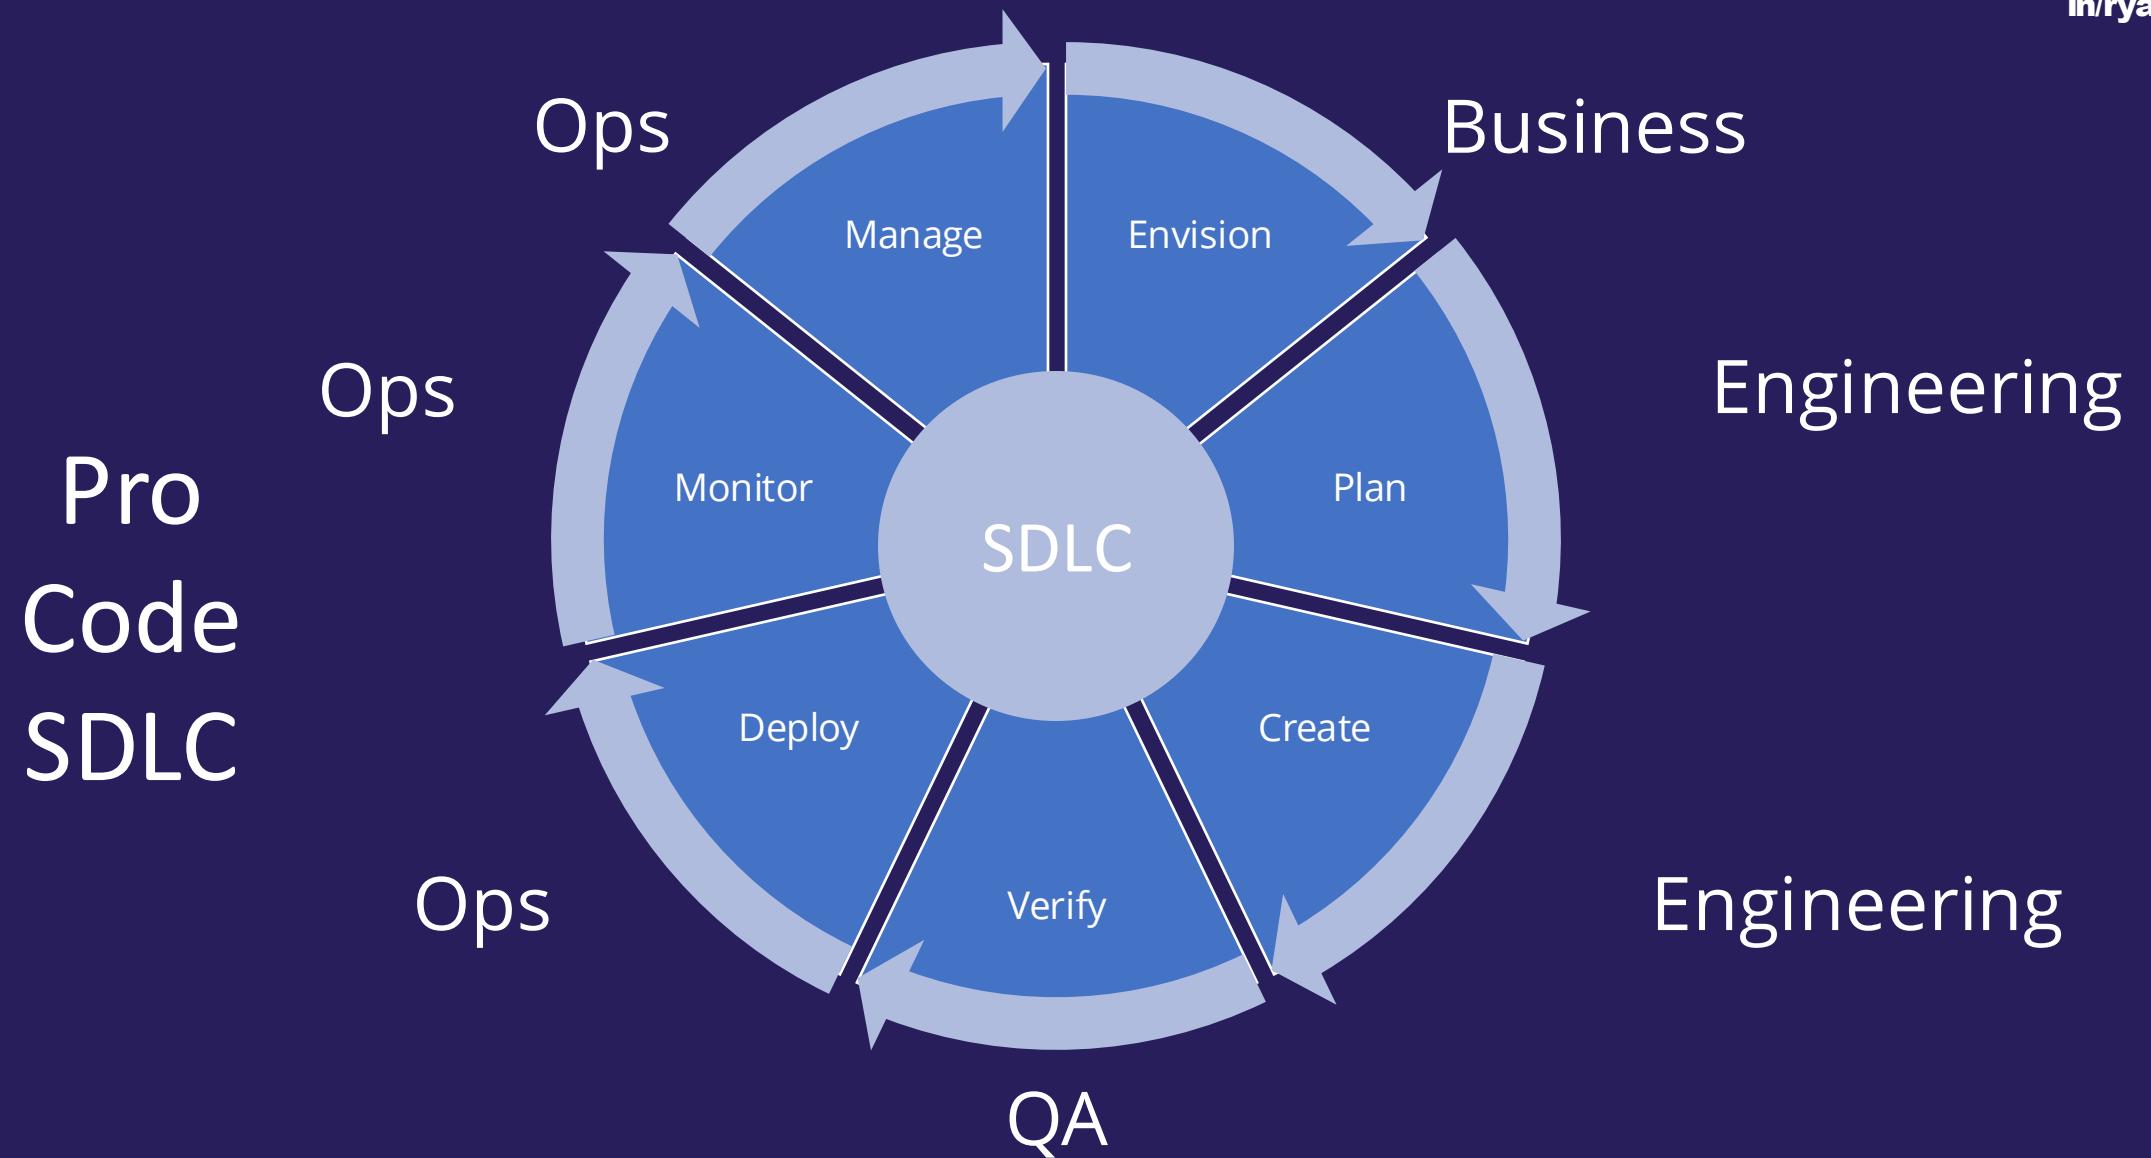

- Microsoft Learn: [What are managed identities for Azure resources](#)
- Microsoft DevBlogs: [Managing secrets securely in the cloud](#)

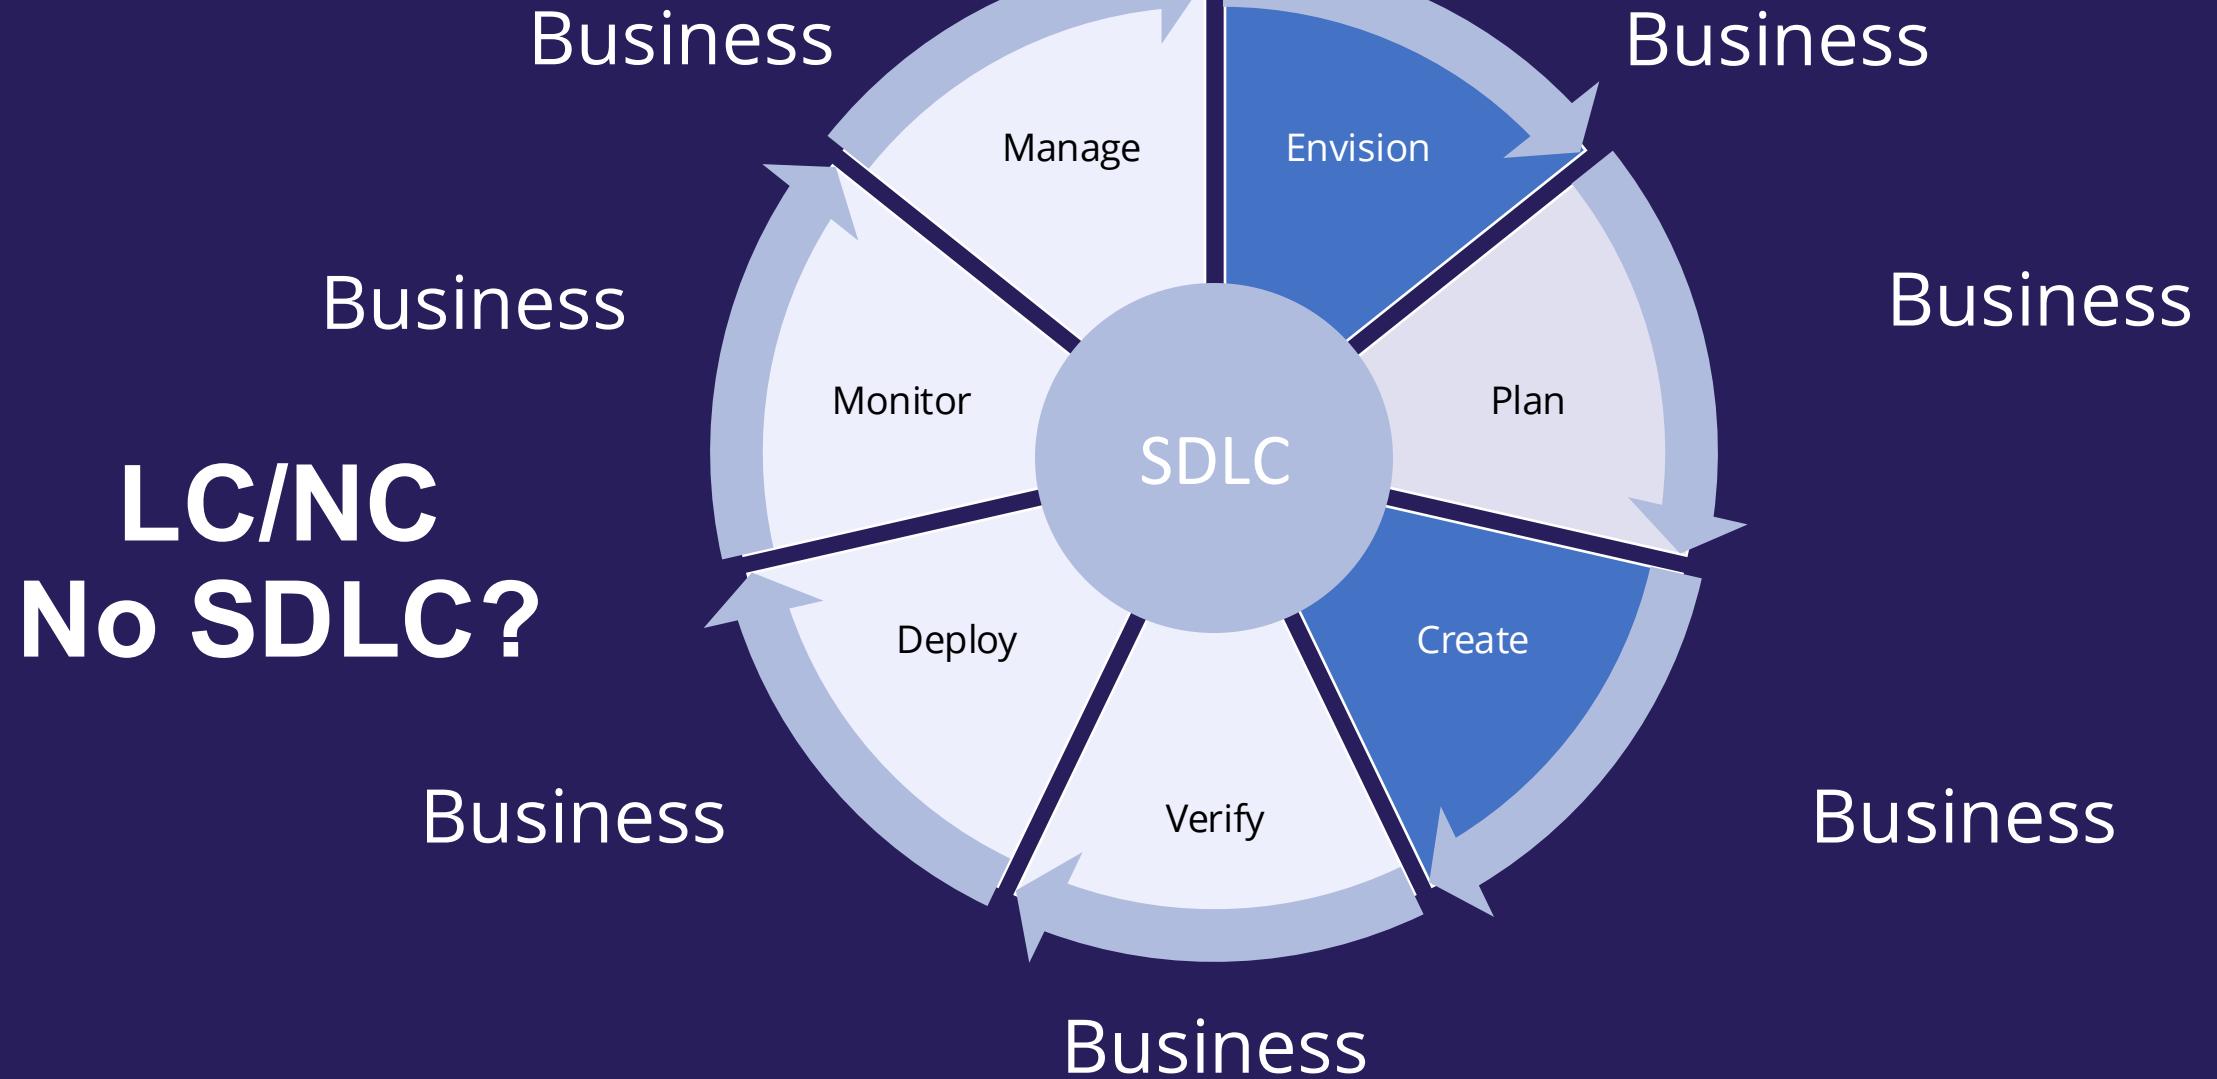

Secure Credential Storage (KeyVault / HSM)- Implement a mechanism to inventory, monitor, maintain, and audit sensitive configuration information in code or configuration files of the code. Never store passwords or other sensitive information in plain text or in unprotected locations. Production secrets should not be used for development or testing.

- Microsoft Learn: [Azure Key Vault](#)
- Microsoft Learn: [Safe storage of app secrets in development in ASP.NET Core](#)

Use Standard Identity Libraries (MSAL): The Microsoft Authentication Library (MSAL) enables developers to easily and securely access Microsoft Graph, other Microsoft APIs, third-party web APIs, or your own APIs.

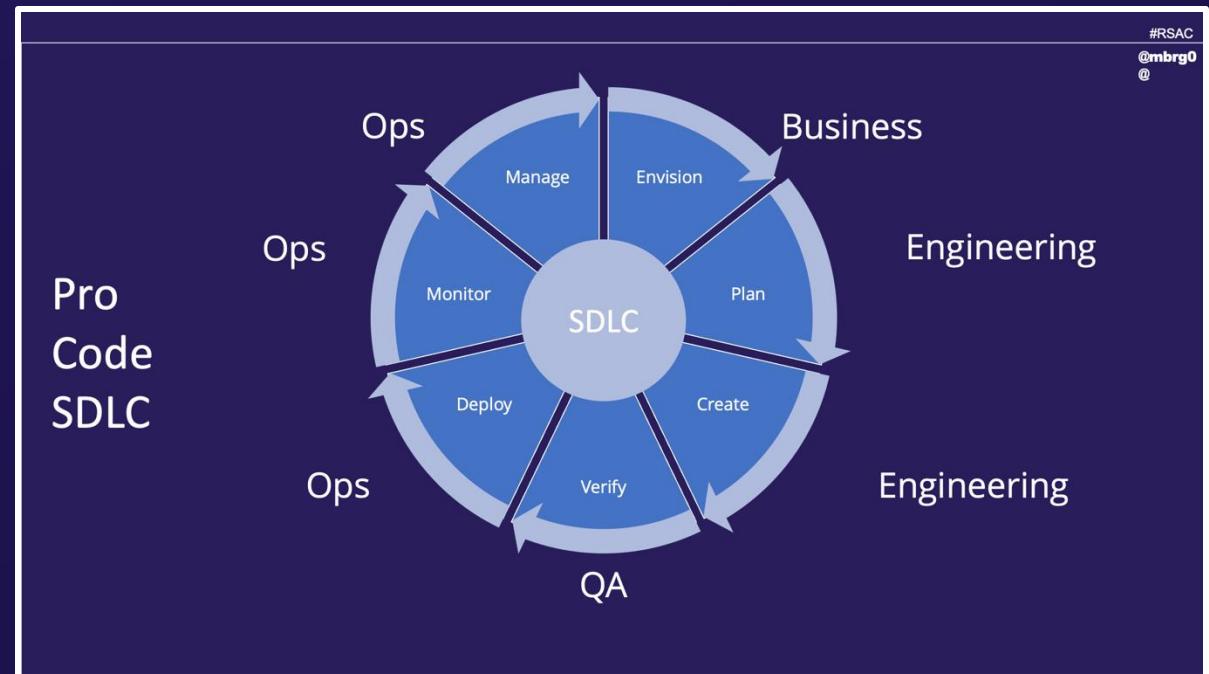

- Microsoft Learn: [Overview of the Microsoft Authentication Library \(MSAL\)](#)
- Microsoft Learn: [Public client and confidential client applications](#)
- Microsoft Learn: [Acquire and cache tokens using the Microsoft Authentication Library \(MSAL\)](#)

How well does SDL Guidance fit?

- Written for Code – LC/NC hides the complexity (and power!) of these tools
- CodeQL (& SAST/DAST/IAST tooling in general) doesn't "speak" LC/NC
- SDL content not written for business user, e.g. Citizen Developer
- Inconsistent CI/CD adoption (use ALM/pipelines!)

*Sure, Let Business Users Build Their Own.
What Could Go Wrong?*

Michael Bargury, BlackHat USA 2023

Stuck at get-go

1. Focus on crown jewels
2. Get developer buy-in
3. Secure Development Lifecycle (SDL)

Building has never been easier

The screenshot shows the Microsoft Power Apps homepage. On the left, a sidebar lists navigation options: Home, Create, Learn, Apps, Tables, Flows, Solutions, Dataflows, AI hub, Agents, More, and Power Platform. The main area features a large banner with the text "Let's build an app. What should it do?" and four buttons: "Collect RSVPs", "Track sales leads", "List inventory", and "Manage inspections". Below the banner, there's a text input field with placeholder text "Use everyday words to describe what your app should collect, track, list, or manage..." and a "Next" button. A note below the input says "This feature is in preview and uses generative AI. See terms." Under the banner, there are three sections: "Start with data", "Start with a page design", and "Start with an app template". The "Your apps" section displays a table of existing applications:

Name	Modified	Owner	Type
Reimbursement Claims	Sep 17, 2024 10:55 AM	Mona Kane	Canvas
Investment Tracker	Sep 15, 2024 2:27 PM	Mona Kane	Canvas
Inventory Management	Sep 12, 2024 4:27 PM	Mona Kane	Canvas
Health Hub	Sep 12, 2024 11:40 AM	Mona Kane	Model-driven
Reimbursement Claims	Sep 12, 2024 11:40 AM	Mona Kane	Model-driven
Investment Tracker	Sep 12, 2024 11:40 AM	Mona Kane	Canvas

If building is easy,
shouldn't fixing vulns be
easy too...?

Remove unused
credentials

Sanitize inputs

Early success → Buy-in

Auto-fix → Early success

Early success → Buy-in

Buy-in → World domination ;)

Auto-fix → Early success

Early success → Buy-in

Buy-in → ~~World domination~~

Scale it

HOW we made it work

Our goals

- Remediate all vulnerabilities (Get-to-Green/Stay-Green)

Our goals

- Remediate all vulnerabilities (Get-to-Green/Stay-Green)
- With 2-3 dedicated headcounts

Our goals

- Remediate all vulnerabilities (Get-to-Green/Stay-Green)
- With 2-3 dedicated headcounts
- Were given 6 months; we finished in a little over 4 months

Our goals

- Remediate all vulnerabilities (Get-to-Green/Stay-Green)
- With 2-3 dedicated headcounts
- Were given 6 months; we finished in a little over 4 months
- Minimum viable product / Self-serve

Minimum Viable Product

- Remediation Guidance: Write it for the business user, not a technical developer

The image consists of three vertically stacked screenshots from a Microsoft Power Platform canvas app interface.
1. The top screenshot shows the navigation bar with a 'Share' button highlighted by a red box.
2. The middle screenshot shows the 'Share' dialog box with a user named 'Org' selected, indicated by a red box around the 'Org' button.
3. The bottom screenshot shows the 'Share' dialog box with the 'Org' user removed, indicated by a red box around the 'Org' button which now has a crossed-out icon.

- 1 Navigate to <insert link> and select the "Share" button on the nav bar.
- 2 Remove "Org" from the users by selecting the X. Power Platform treats this user group as all of Azure AD.
- 3 Replace with a more tightly focused security group or set of users.

Our goals

- Remediate all vulnerabilities (Get-to-Green/Stay-Green)
- With 2-3 dedicated headcounts
- Were given 6 months; we finished in a little over 4 months
- Minimum viable product / Self-serve
- Auto-fix (where possible)

Minimum Viable Product

- Automatic Remediation: Is the security violation auto-fixable?

Minimum Viable Product

- Automatic Remediation: Is the security violation auto-fixable?
 - Do we have enough context?
 - Can Zenity put the asset in a secure state?

Minimum Viable Product

- Automatic Remediation: Is the security violation auto-fixable?
 - Do we have enough context?
 - Can Zenity put the asset in a secure state?
 - If YES... we trigger correcting the misconfiguration silently while the developer sleeps

Minimum Viable Product

- Balance a reasonable time to fix before we “shift + delete” in secure assets (Apps, Flows, etc.)
 - We settled on “30 days-to-fix” as a reasonable compromise providing “just enough time” vs. “not too much time”

Minimum Viable Product

- Balance a reasonable time to fix before we “shift + delete” in secure assets (Apps, Flows, etc.)
 - We settled on “30 days-to-fix” as a reasonable compromise providing “just enough time” vs. “not too much time”

Minimum Viable Product

- Brownfield: Pre-existing risk/security violations created on or before Jan 1st, 2024 (when our campaigns started)

a.k.a. “Get to Green”

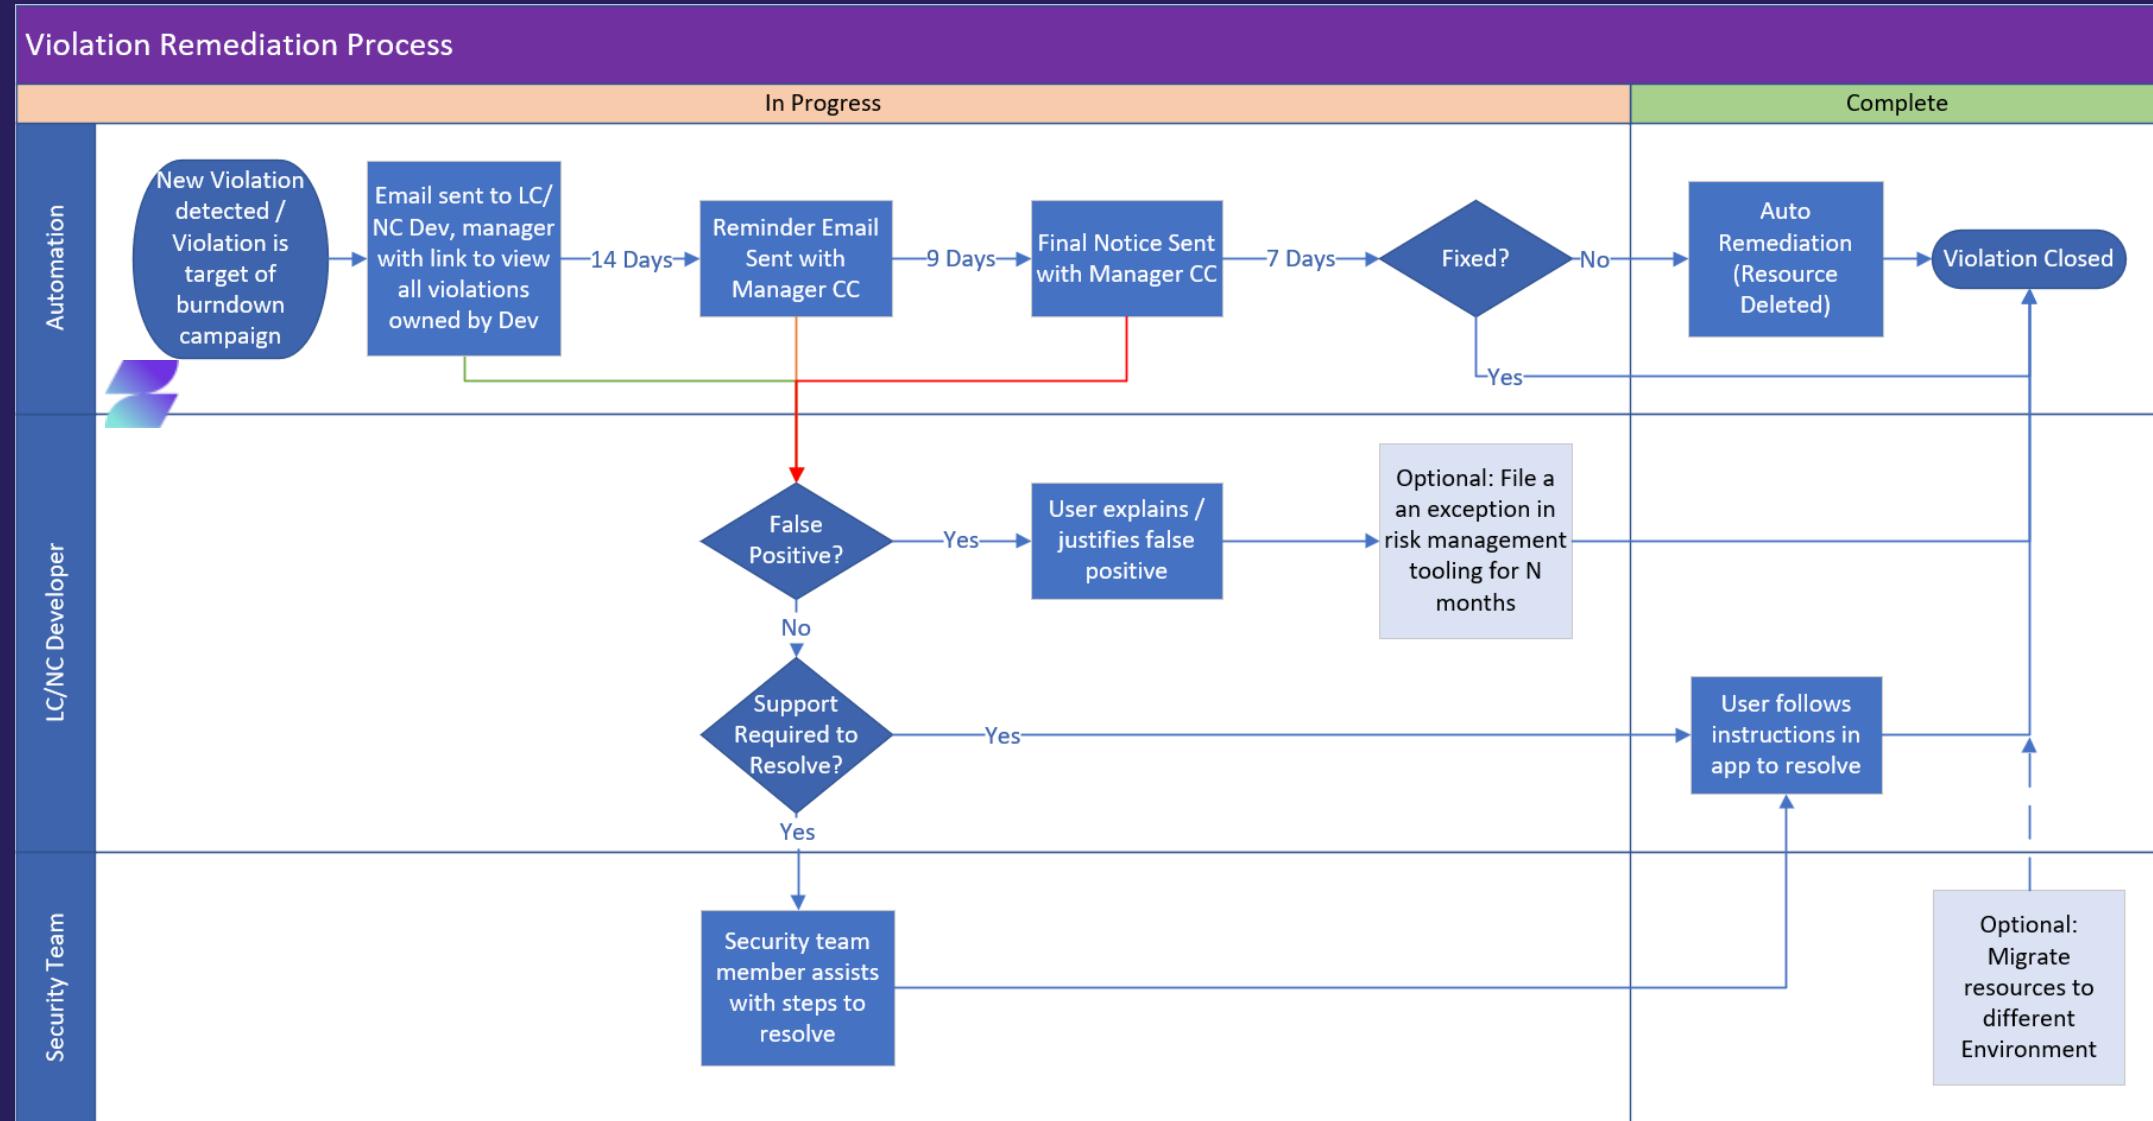

Minimum Viable Product

- Brownfield: Pre-existing risk/security violations created on or before Jan 1st, 2024 (when our campaigns started)
- Greenfield: Net new risk created continuously/daily in our tenant after Jan 1st, 2024

a.k.a. “Stay Green”

Early Success led to longer campaigns

This message was sent with High importance.
If there are problems with how this message is displayed, click here to view it in a web browser.

Final Notice

Digital Security & Resilience

Take action to prevent your resource(s) from being deleted

A security scan within the Power Platform found that you have one or more items that need to be addressed. To resolve this, please follow the instructions below and navigate to [the violation dashboard](#) to view your current violations.

This is the final notice you will be sent. If no action is taken to fix the violation, the resource(s) will be deleted.

Instructions
Please complete the necessary actions no later than Thursday, October 3, 2024. If no action is taken, the resource(s) will be deleted.

1. Launch the violation dashboard by selecting the button below.
2. Click on each item to view the security risks associated with the resource.
3. Select "Steps to fix" once a violation is selected to view instructions to resolve the violation.
4. If support is required or you would like to request an exemption from the violation, please select the "Contact support button" within the selected violation.

[View your violations](#)

POWER PLATFORM VIOLATION DASHBOARD

Hello [REDACTED] Please review all violations below and follow the steps to remediate by selecting on each item.

RESOLVE BY: 11/12/2024 X

Violation Description	Steps to Fix	Violation Activity
Violation summary The Connection "AZ [REDACTED] Prod" is using non-Entra ID authentication. The Connection is using a secret key or password instead.		
What caused this violation? [REDACTED]		
Explanation One of the most common use-cases in Microsoft Power Platform is to share your work with your peers or other people in the organization. Unfortunately, when an application/flow is shared, their connections are implicitly shared as well as is. Once a connection with unsafe authentication methods (secret key or password) is shared, it means that the receiving users will get full access to use it, and the embedded credentials, as they are, could be used outside of the original scope and intention of the application/flow.		

[View Connection](#) [Delete Connection](#) [Contact Support](#) [Report as False Positive](#) [Request Exemption](#)

Microsoft 3 violations detected [REDACTED] Set User Give feedback v.20241008.2

The screenshot shows a dashboard titled 'POWER PLATFORM VIOLATION DASHBOARD'. It displays three violations:

- AZ [REDACTED] Prod: Connection is using an on-prem connector. Status: Due Date: Not Set.
- AZ [REDACTED] Prod: Connection is accessible by the entire tenant. Status: Due Date: 11/12/2024.
- AZ [REDACTED] Prod: Connection is using a shareable authentication method. Status: Due Date: 11/12/2024.

Each violation has a 'View' icon and a 'Delete' icon. A note on the right states: 'NOTE: A scan for this item is completed every Tuesday. If the connection is deleted by selecting the "Delete" button below, it will no longer be visible in the violation list. Otherwise follow the refresh schedule accordingly to check for updates.'

- If rule ID is XYZ, and other condition(s) are true...
...then take these actions

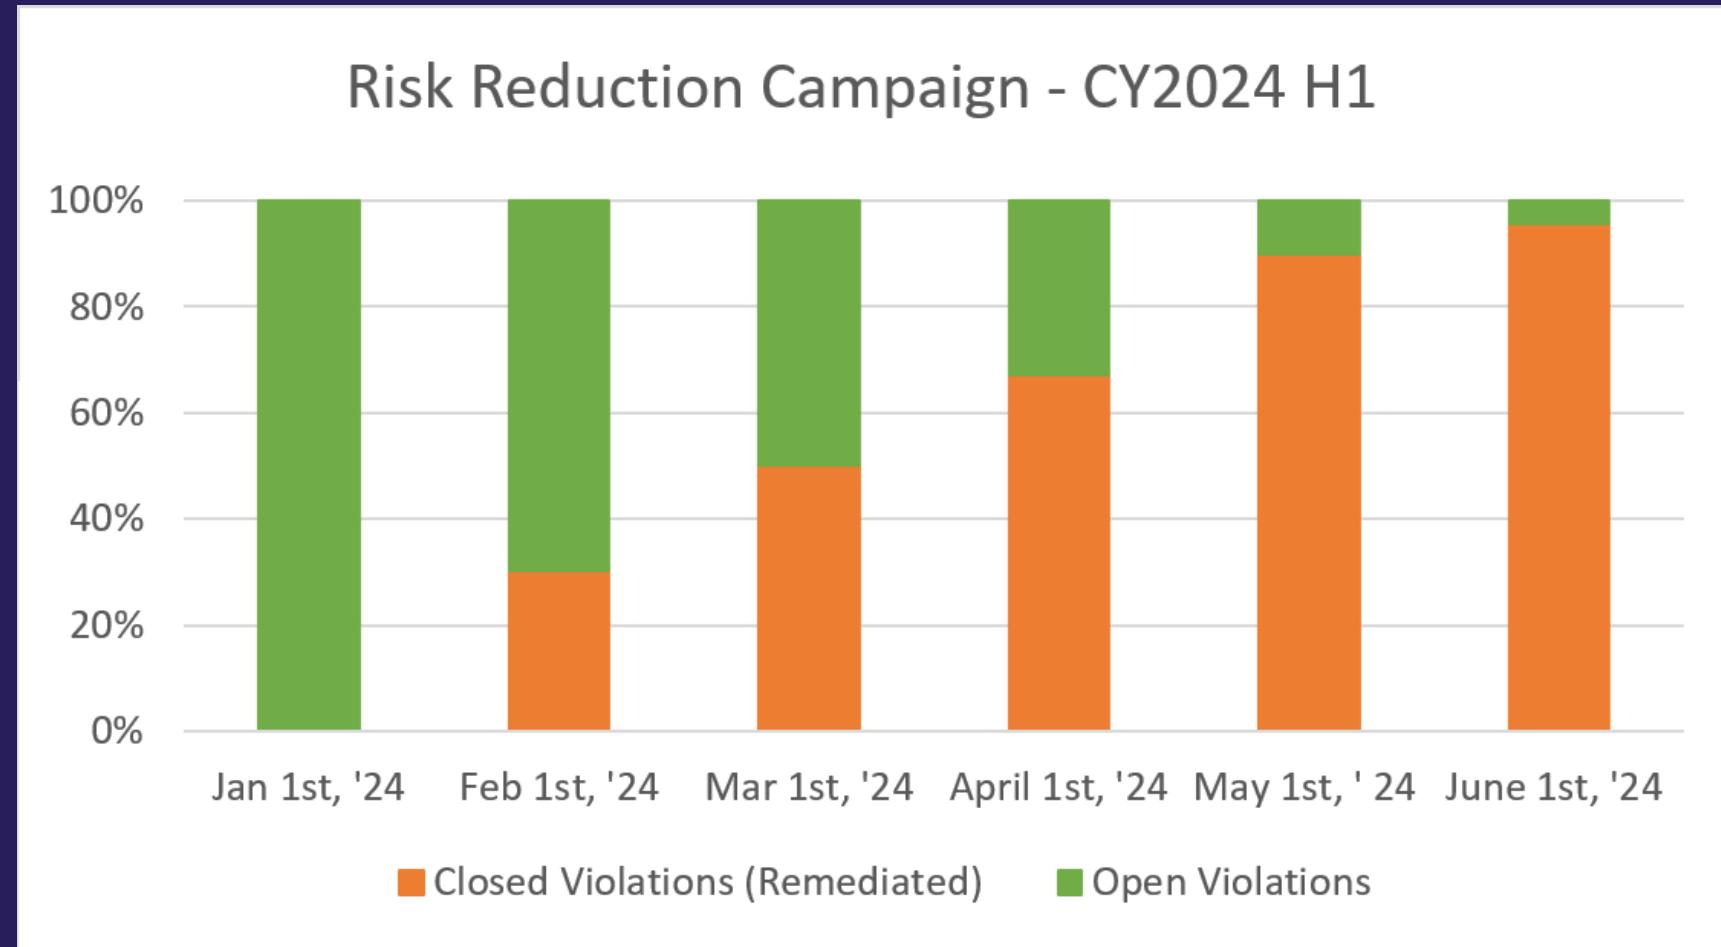

Results

- Jan 18th, 2024 – April 30th, 2024
 - Prove we can scale-up
 - Prove we can Get-to-Green in two environments
 - Prove we can Get-to-Green and Stay-Green with identical tooling and processes

SUCCESS

SUCCESS

* Never get to 100% remediated because of 30 days-to-fix

Takeaways

What did we learn from this?

- Leverage industry-standard security risk categorization

OWASP Low-Code/No-Code Top 10

- LCNC01: Account Impersonation
- LCNC02: Authorization Misuse
- LCNC03: Data Leakage and Unexpected Consequences
- LCNC04: Authentication and Secure Communication Failures
- LCNC05: Security Misconfiguration
- LCNC06: Injection Handling Failures
- LCNC07: Vulnerable and Untrusted Components
- LCNC08: Data and Secret Handling Failures
- LCNC09: Asset Management Failures
- LCNC10: Security Logging and Monitoring Failures

OWASP Large Language Models Top 10

- LLM01: Prompt Injection
- LLM02: Insecure Output Handling
- LLM03: Training Data Poisoning
- LLM04: Model Denial of Service
- LLM05: Supply Chain Vulnerabilities
- LLM06: Sensitive Information Disclosure
- LLM07: Insecure plugin design
- LLM08: Excessive Agency
- LLM09: Overreliance
- LLM10: Model Theft

As LC/NC platforms increasingly embrace AI, this will become increasingly relevant

What did we learn from this?

- ✓ Leverage industry-standard security risk categorization
- Prioritize what we want to fix first

6 Risk Reduction Campaigns

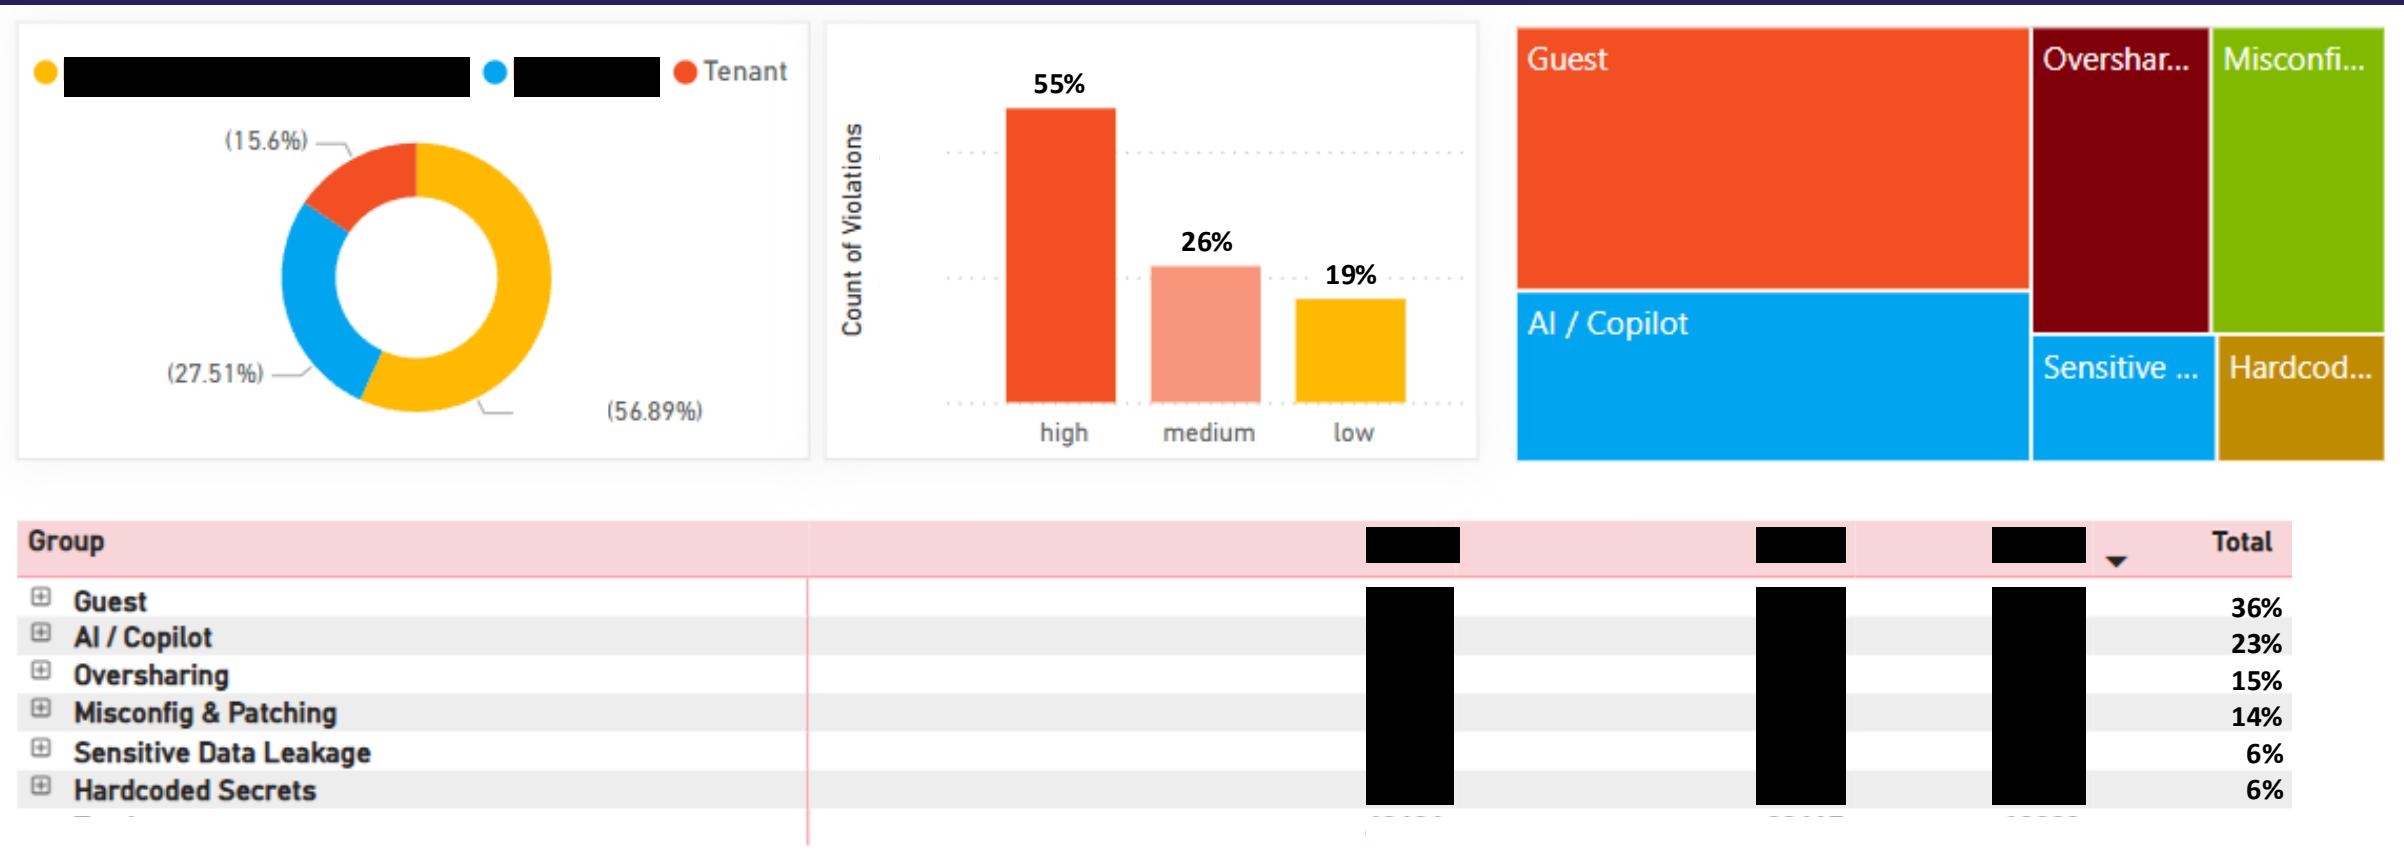

Merged similar OWASP Top 10 categories together & reviewed SDL gap analysis

- Also pivoted on Senior Leadership Team priorities

“Oversharing...” and “Sensitive data...” sound identical, but there were enough distinctions in the scanning ruleset that they were distinct campaigns.

Campaigns included:

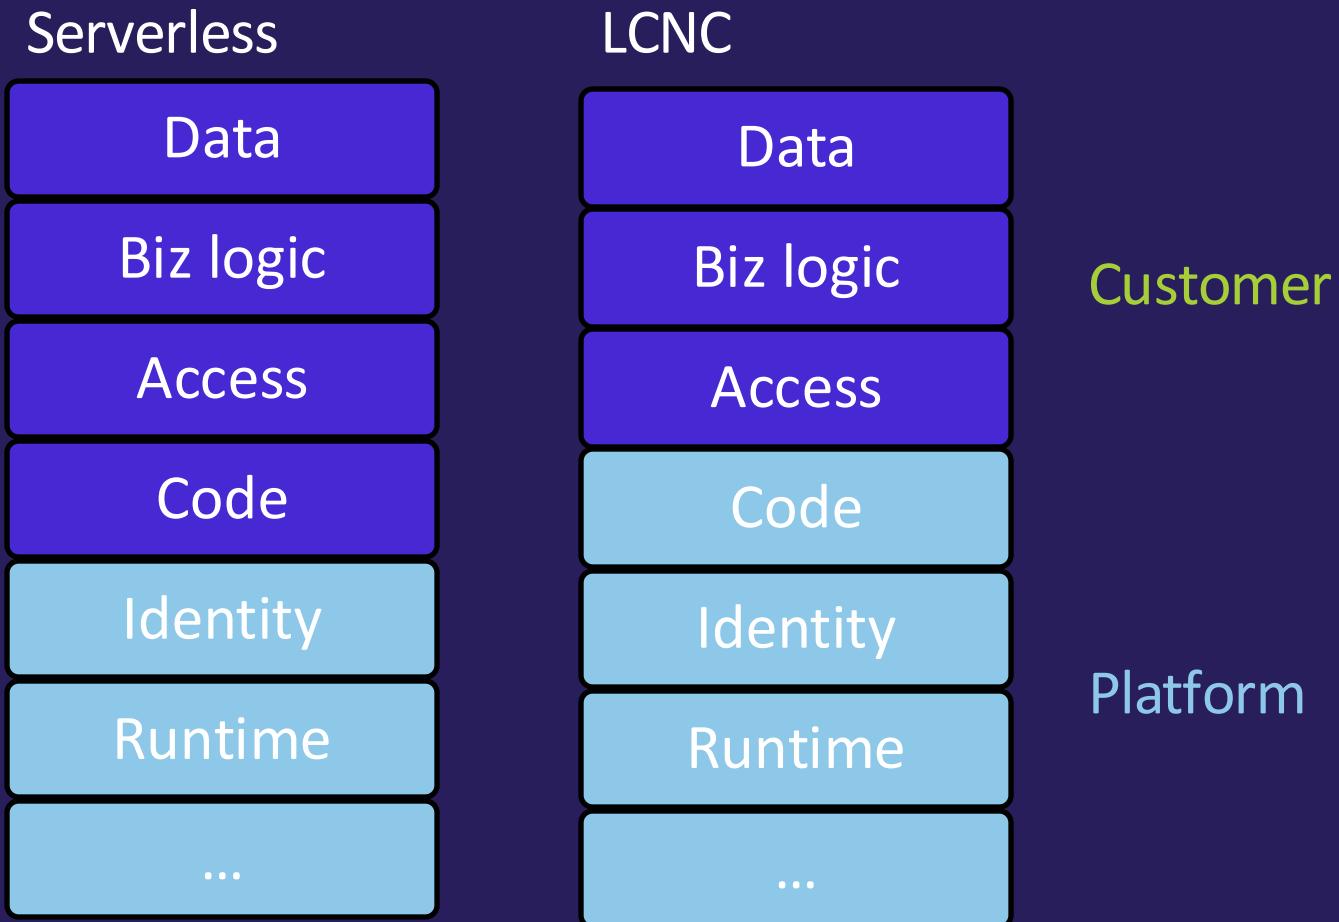

- Guest/Access Control
- AI/Copilot issues
- Oversharing of data
- Sensitive Data Leakage
- Hardcoded Secrets
- Misconfig & Miscellany

What did we learn from this?

- ✓ Leverage industry-standard security risk categorization
- ✓ Prioritize what we want to fix first
- Shared Responsibility Model

We must own our side of the Shared Responsibility Model

Shared Responsibility Model for LC/NC

Domain	Responsibility	Role Accountability			
		LC/NC Dev.	LC/NC Admin	Security Team	LC/NC Platform
Access Control	Identity, Access Control	√			
Access Control	Sharing, Ownership	√			
Business Logic	Connectivity, Integration, Plugins, & Agents	√			
Business Logic	Data flows, Control Flows, Integration	√			
Data Management	Data and Secret Handling	√			●
Data Management	Data Governance	√			
Data Management	Encryption	√			●
Governance	Application Security / Risk Assessment	○	●	√	
Governance	Developer Lifecycle Governance	○	●	√	
Governance	Developer Training and accountability	○	●	√	
LC/NC Platform	Hygiene Management		●		√
LC/NC Platform	LC/NC Platform configuration, policies, settings, security controls		●	●	√
Platform(s)	Harden other services besides LC/NC Platform		<Other Admins>	○	

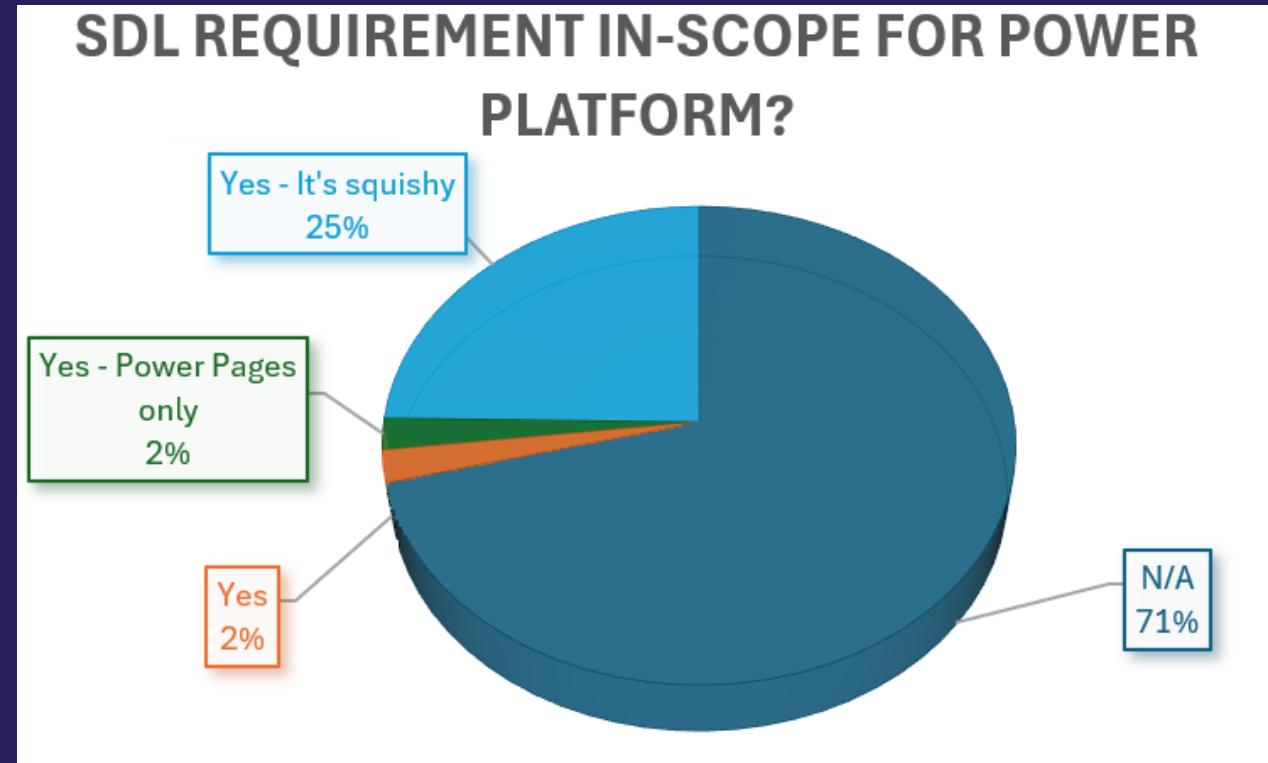

√	Directly accountable/responsible
●	Responsible (in partnership)
○	Consulted/Informed, may take some action

What are the priorities?

- ✓ Leverage industry-standard security risk categorization
- ✓ Prioritize what we want to fix first
- ✓ Shared Responsibility Model
- De-facto SDL enforcement

Remember this gap analysis?

- Successful SDL uses automation for the more technical requirements
- Our processes give us “de-facto” SDL across our corporate network
 - Sorry, no Threat Models. ☹

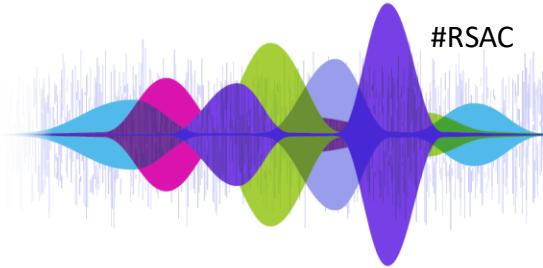

What did we learn from this?

- ✓ Leverage industry-standard security risk categorization
- ✓ Prioritize what we want to fix first
- ✓ Shared Responsibility Model
- ✓ De-facto SDL enforcement

Conclusion

Apply What You Have Learned Today

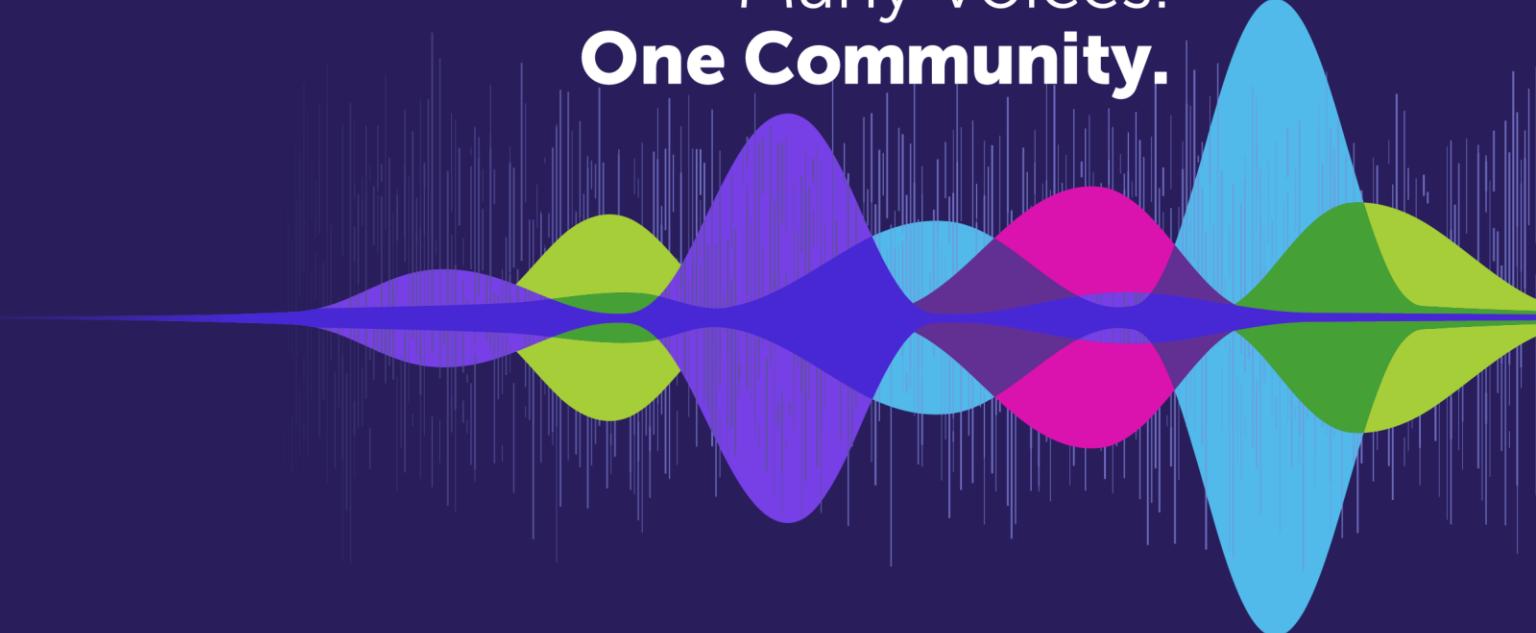

- Next week you should
 - Identify citizen development platforms within your organization
 - Focus on AI usage
- In the first three months following this presentation you should
 - Inventory apps and agents built by citizen developers
 - Define approved use cases and identify deviations
 - Define appropriate controls leveraging the OWASP LCNC/LLM Top 10
- Within six months you should:
 - Select a security system which enforces policy according to your organization's needs
 - Expand approved use cases for citizen development relying on automated security controls
